

Introducing the EVGA GeForce GTX 1060

- **Tuesday, July 19, 2016** – The EVGA GeForce GTX 1060 graphics card is loaded with innovative new gaming technologies, making it the perfect choice for the latest high-definition games. Powered by NVIDIA Pascal – the most advanced GPU architecture ever created – the GeForce GTX 1060 delivers brilliant performance that opens the door to virtual reality and beyond.

These cards also feature EVGA ACX cooling technology. EVGA ACX once again brings new and exciting features to the award winning EVGA ACX cooling technology. SHP gives increased heatpipes and copper contact area for cooler operation, and optimized fan curve for even quieter gaming. Of course, ACX coolers also feature optimized swept fan blades, double ball bearings and an extreme low power motor, delivering more airflow with less power, unlocking additional power for the GPU.
