

Introducing the EVGA PQ Power Supplies

- **Thursday, April 5, 2018** – Introducing the EVGA PQ Power Supplies

Available with 80 Plus Platinum efficiency in 750W, 850W, and 1000W models, the EVGA PQ Power Supplies are the embodiment of premium quality, premium performance and premium value.

- Whisper Silent

The EVGA ECO mode feature ensures that the power supply stays completely silent during low to medium loads. The fan does not spin until necessary, allowing for completely silent operation!

- Unrivaled Performance

Platinum efficiency or higher under typical loads and 100% Japanese capacitors ensure long-term reliability.

- Semi-Modular Design

The EVGA PQ power supplies use a semi-modular design. With only the 24-pin power connector hard wired directly to the power supply, the PQ allows you to use only the cables you need and leave off cables you don't need. Even better, the EVGA PQ is compatible with a variety of EVGA's Individually Sleeved Cable Kits.

Additionally, these power supplies feature these qualities:

- Single +12V rail
- Active Clamp Circuit Design
- NVIDIA® SLI Ready
- 100% High Quality Japanese Capacitors
- Full suite of protections, including OVP, UVP, OCP, OPP, SCP, and OTP
- Whisper Silent with 135mm Fluid Dynamic Bearing Fan
- EVGA's Unbeatable 10 Year Warranty
