

EVGA introduces the PD03 Zero Client for PCoIP

- Tuesday, July 24, 2012 –

EVGA's PD03 is the right solution for any user looking to gain the best experience a zero client can offer. The EVGA PD03 is "a true zero client" providing the user with a small foot print design, low power consumption, centralized virus protection, OS versatility and full USB support.

Centralized computing is now a truly viable option for all user types, either locally via LAN or remotely via WAN. PCoIP broadcasts only the encrypted pixels not the data across the network to the client. This makes it possible for a stateless, decode only device, a true zero client.

Key Features introduced on the EVGA PD03 Zero Client:

- * Imprivata OneSign Virtual Desktop Access
- * Small foot print construction
- * Newly Redesigned passive cooled chassis
- * TAA Compliant models available
- * Less than 15W power usage

Experience more with PCoIP here.

About EVGA

EVGA is the #1 NVIDIA authorised partner in channel sales throughout North America and UK. Based on the philosophy of intelligent innovation, market knowledge, and the real time operation, EVGA continues to identify the need in the market place and providing the solution to that need. By offering product differentiation, a 90 day Step-Up programme, and other customer focused programmes, EVGA is a clear leader in all categories: etail, retail, distribution, and system integration. With headquarters in Brea, CA, EVGA's global coverage includes EVGA GmbH in Munich, EVGA LATAM in Miami, and EVGA Hong Kong. For further information online about EVGA, visit: <http://eu.evga.com>.
